7.1.1 Spring Design Procedures 1. Determine what spring rate and deflection or spring travel is required for your particular application. Also, determine the energy requirements. 2. Determine the space limitations in which the spring is required to work and try to design the spring accordingly, using a parallel arrangement if required, or allow space in the mechanism for the spring per its calculated design dimensions. 3.

On the design front, remember that plastic coil springs are not your only option. Consider a zig zag or other design whenever possible; or try a cylindrical spring instead. This design replicates the action of a coil spring, but uses a high-modulus resin and flexible beams to achieve greater stiffness than molded coil springs.
