highly variable findings.

(PDF) National clinical guidelines for podiatric foot orthoses

Ankle-foot orthoses (AFOs) are used in two ways: first as an aid for ambulation, providing both support and assistance and allowing the patient to move through the various stages of gait. The AFO can be articulated at the ankle with various types of ankle joints that will limit or assist dorsiflexion and plantarflexion as needed.

Ankle Foot Orthosis - an overview | ScienceDirect Topics

Basic principles Orthoses are based on a minimum of three point force systems; an example for controlling foot plantar flexion is provided in Figure 16.1 and Table 16.2. By considering where to apply forces for the desired effect we can ensure our orthosis is designed and applied appropriately and where potential pressure problems may arise.

Orthosis - an overview | ScienceDirect Topics

An ankle-foot orthosis (AFO) is an orthosis or brace that encumbers the ankle and foot. AFOs are externally applied and intended to control position and motion of the ankle, compensate for weakness, or correct deformities. AFOs can be used to support weak limbs, or to position a limb with contracted muscles into a more normal position.

Orthotics - Wikipedia

Orthotics and Neuro Prosthetics Clinical Practice Guideline (in process) To evaluate the effectiveness of ankle foot orthoses and functional electrical stimulation devices in reducing foot drop in patients with post-stroke hemiplegia. Conservative management of foot problems in patients with rheumatoid arthritis (RA) may consist of the prescription of customised foot orthoses. Indications for foot orthoses are not clear and the effectiveness of the intervention is highly variable among patients. Knowledge on which patients benefit the most from foot orthoses can help to select patients eligible for this type of intervention.

Factors predicting the outcome of customised foot orthoses ...

Pratt 4) observed that functional foot orthosis prevented or corrected foot malformation, formed a sufficient base of support, promoted standing or walking exercise, and improved gait efficiency. Foot orthoses are also crucial aids for treating dysfunction of the lower extremities related to abnormal mechanisms and alignment 5). Foot orthoses are used to prevent excessive pronation or supination, the most basic causes of lower limb injuries, and to
