Locus Problems. Locus "Locus" is a Latin word for "place." Its plural is "loci." In geometry, "locus" refers to a set of points that are described by some statement about their position. For example, the locus of points that are 1 unit from point A refers to the set of all points that are 1 unit from point A . This would be the circle with center A :

$\therefore r=2\cos\theta$, which is already an equation for the locus of M in polar form ! $r=2\cos\theta$ is an equation of a circle. You can change back to Cartesian co-ordinate form. Multiply both sides by r , we get: $r = 2 \cos\theta \times r = 2x$ Therefore the locus of M is $x + y - 2x = 0$.
