Hurth Transmission Problems

Jul 12, 2009. #2. The transmission free wheeling while in "ahead" is not soemthing to be concened about. The oil loss and tapping sound together might indicate a bearing on the way out. possibly the oil is coming from the front main seal which, of course you can't see without removing the gear box.

ZF Hurth Transmission Problem - Maintenance, Tech Info ...

When a hurth gets reluctant to shift into gear, its time to change the fluid. It will look super clean on the dipstick,but will look like mud in a container, when you drain it out.If it's still reluctant ,run it a bit, then change it again. That may solve your problem, before taking things apart. bristol299bob

Kanzaki/Hurth KBW10 Transmission trouble | SailNet Community

The engine on the other hand does indeed have an issue. The transmission that shifts into and out of gear and shows no signs of problems in the oil quality, cannot cause the engine to appear to loss power. The engine issue should be corrected first and then another look at the transmission will be in order.... About the transmission noise.

Checking the Hurth HBW 50 transmission oil level; Changing the fuel filters on the Universal M25; Replacing the Oberdorfer salt water pump 202 M-15 impeller; Touching up - practically repainting - the paint on the Universal M25 engine; Draining the coolant from the Universal M25; Refilling the coolant and bleeding the cooling system.

Universal M25 Diesel with Hurth HBW-50 transmission

If your transmission was slipping in and out of gear at a rapid rate at very low rpm and then it is fine when you add only about 50 to 100 rpm then I would bet you just need to adjust the idle. Also of interest would be the hydraulic pressure being fed to the gear box. If it is low for whatever reason you could have a problem at very low rpm.

Transmission Chatter at Idle | Club Sea Ray

If one or both trans seem 'loud' below about 900 rpm and then clear up much more beyond that point there is a TSB from Hurth describing that as 'normal'. I still cannot tell if that is your case but if you cannot hear the problem above the engine noise at 900-1,000 rpms I would say it must be minimal.

zf hurth hsw 800 a transmission noise - BAYLINER OWNERS CLUB

However, this replacement transmission, ZF's 10M with a 2.05:1 reduction ratio, is a bolt-on replacement for both transmissions except it is about 1" longer front to back than the original HBW50. If you are replacing the larger HBW100 transmission, the overall length of this replacement ZF 10M, is the same.

Transmission - New Replacement 10M
