Below are the details of the changes made to 2015 guidelines for BLS: The change from the traditional ABC (Airway, Breathing, Compressions) sequence in 2010 to the CAB (Compressions, Airway, Breathing) sequence was confirmed in the 2015 guidelines. The emphasis on early initiation of chest compressions without delay for airway assessment or rescue breathing has resulted in improved outcomes.

(ACLS) 2015 – 2020 BLS Guidelines Changes

Scan the patients chest and torso for possible movement during the "assess unresponsiveness" portion of the algorithm. Watch for abnormal breathing or gasping. If the patient is breathing adequately; Continue to assess and maintain a patent airway and place the patient in the recovery position.

BLS Algorithms 2020 (Basic Life Support)

The 2015 guideline now defines the target depth for adult compressions to be between 2-2.4 inches (5-6 centimeters). Research reviewed by the ILCOR revealed that compressions delivered beyond this depth may result in an increased risk of resuscitation related injuries, such as rib fractures, which is what led to this change in 2015 guidelines.
